

**AMENDMENTS TO THE CLAIMS**

1. (Original) A method for supplying oxygen to a water purification process, said method comprising:

- a) providing an oxygen carrier of at least one copolymer of dimethylsiloxane, ethylene oxide and propylene oxide;
- b) adding said oxygen carrier to the water purifying process; and
- c) contacting said oxygen carrier with an oxygen containing gas.

2. (Original) A method according to claim 1, wherein said copolymer is added as an emulsion, or as a copolymer immobilized on and/or in a support.

3. (Original) A method according to claim 2, wherein said support immobilized copolymer further includes immobilized microorganisms thereon.

4. (Original) A method according to claim 2 or 3, wherein said support is selected from the group consisting of organic supports and non-organic supports.

5. (Currently Amended) A method according to ~~any one of claim 1-4~~ claim 1, wherein said oxygen containing gas is added to the process either continuously or batch-wise.

6. (Currently Amended) A method according to ~~any one of claims 1-5~~ claim 1, wherein said copolymer is added to the aerobic steps of the water purifying process.

7. (Currently Amended) A method according to ~~any one of claims 1-6~~ claim 1, wherein said at least one copolymer comprises 10-40 % by weight of dimethylsiloxane, 20-60% by weight of ethylene oxide, and 10-60 % by weight of propylene oxide.

8. (Original) A method according to claim 7, wherein said copolymer comprises 15-35% by weight of dimethylsiloxane, 25-45% by weight of ethylene oxide and 20-50% by weight of propylene oxide.

9. (Original) Use of at least one copolymer of dimethylsiloxane, ethylene oxide and propylene oxide, as an oxygen carrier in a water purification process.

10. (Original) Use according to claim 9, wherein said at least one copolymer comprises 10-40 % by weight of dimethylsiloxane, 20-60% by weight of ethylene oxide, and 10-60 % by weight of propylene oxide.

11. (Original) Use according to claim 10, wherein said copolymer comprises 15-35% by weight of dimethylsiloxane, 25-45% by weight of ethylene oxide and 20-50% by weight of propylene oxide.
